## New Technology in Endoscopic Imaging

The introduction of 4K Ultra High Definition (UHD) in medical endoscopy has provided many advantages to the surgeons to see more details and to observe fine patterns and structures in higher precision. Much more subtle differences in reds and yellows than conventional Full HD.

Yet the obstacle here is the very high cost that is restraining many hospitals and surgical centers from upgrading to the Ultra High Definition (UHD) Camera system.

We have developed state-of-the-art, made in USA, endoscopic UHD Camera at a more affordable price and not compromising the advantage of this new technology.

On the contrary we are offering more advantages over our competitors.

### Camera System Advantages

- Brighter Image: Higher image intensity. Stable LED light
- Affordability: No special 4K scope required. No special light cable required
- True 4K Resolution: No binning
- Hassle-Free Handling: USB 3.0 connection
- Operating Temperature: 0 – 55°C Storage Temperature: -20 to 60°C
